TECHNOLOGY (I) PVT. LTD.**

SPRAY BOOTH FILTER AND AIR FILTERS

Clean Air Is Our Business

1. Paint – Shop GF80, GF60

GF80 Glass pad filter is able to absorb the disassociation of paint particles completely and keep the discharged air clean and the air circulated in the spray booths becomes much purer. Replacing the filter timely can avoid the paint particle block and prevent the danger caused by high pressures in the spray booth.

2. Ceiling Filter GFC- GFC-1, GFC-2, GFC-3

The above series filters can collect all tiny dust particles that may cause the pollution to the paint. So that the air in the spray booths is clean and the air circulation is very equal. Please note the exact filter sizes and the models when replacing the used filters.

3. Primary Filter GFC-130, GFC-180, GFC-250

It mainly absorbs the larger dust particles in the air to prevent the pollution and block on the ceiling filters. Replacing the used GFS series filters timely can prolong the time for the ceiling filter. The filter sizes and models depend on the spray booth dimensions.
